# Logon Positive flow:

## ePayIT Security

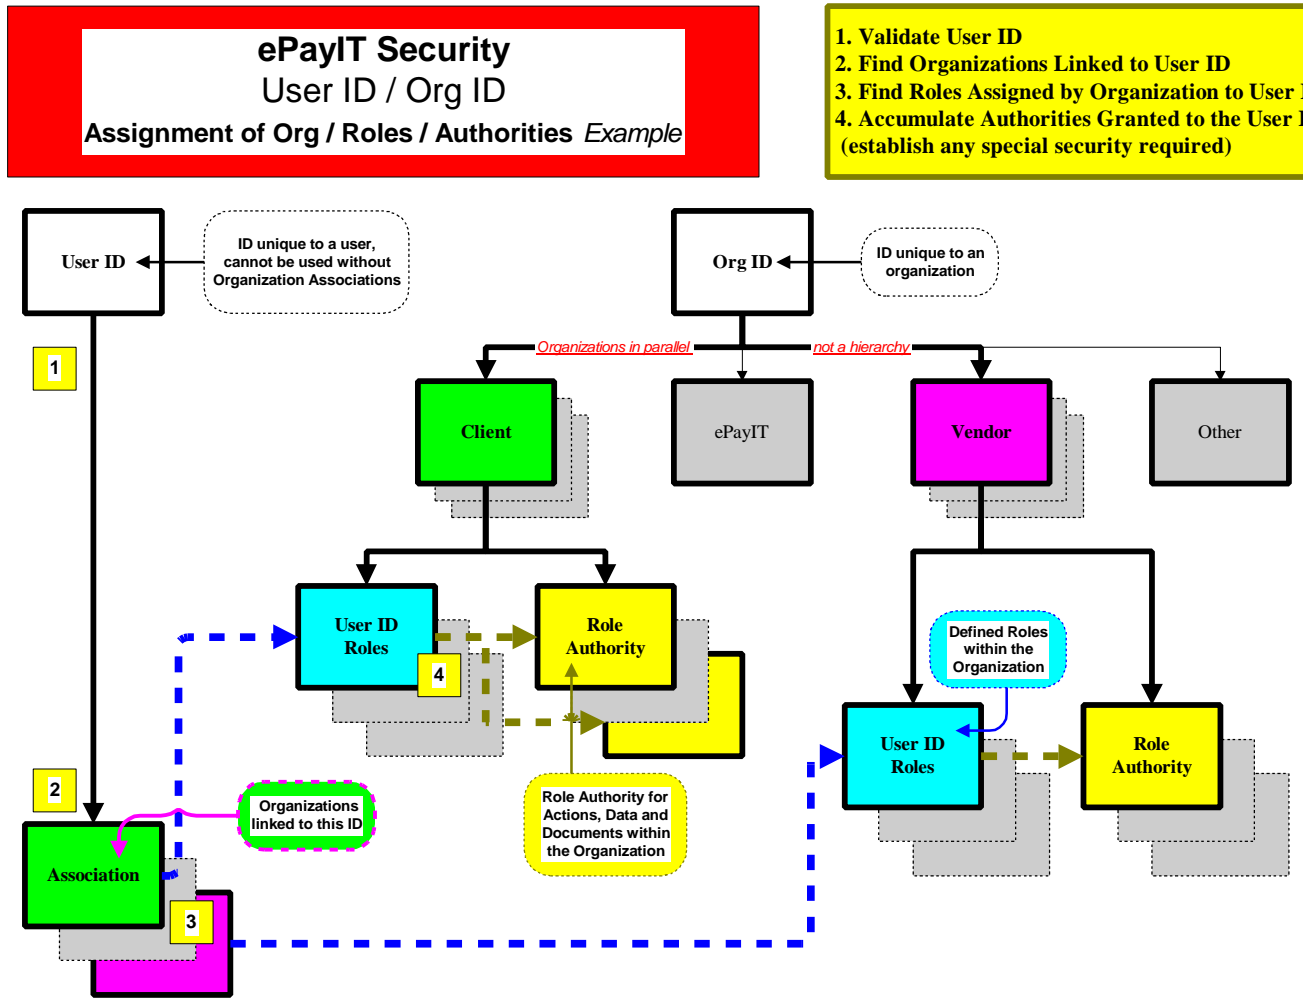

### User ID / Org ID

who am I, what can I do? *Example*

- ### Security Validation Flow
1. User enters Login information on initial screen
  2. Validate User ID against active User IDs
  3. Update error counts, check error cutoff, display error message
  4. Disable User ID, break User ID link to ePayIT
  5. Validate Password against User ID Data
  6. Validate Secret Word against User ID Data
  7. Establish Organization Association of User ID
  8. If more than one Org ID association, ask which to use
  9. Validate response, establish roles
  10. determine need for certificate
  11. validate certificate assigned to User-ID
  12. determine need for token
  13. request token information
  14. validate token
  15. determine functions for roles, determine active status of todo objects
  16. display todo screen

## Logon Assignment of Org / Roles / Authorities Example:

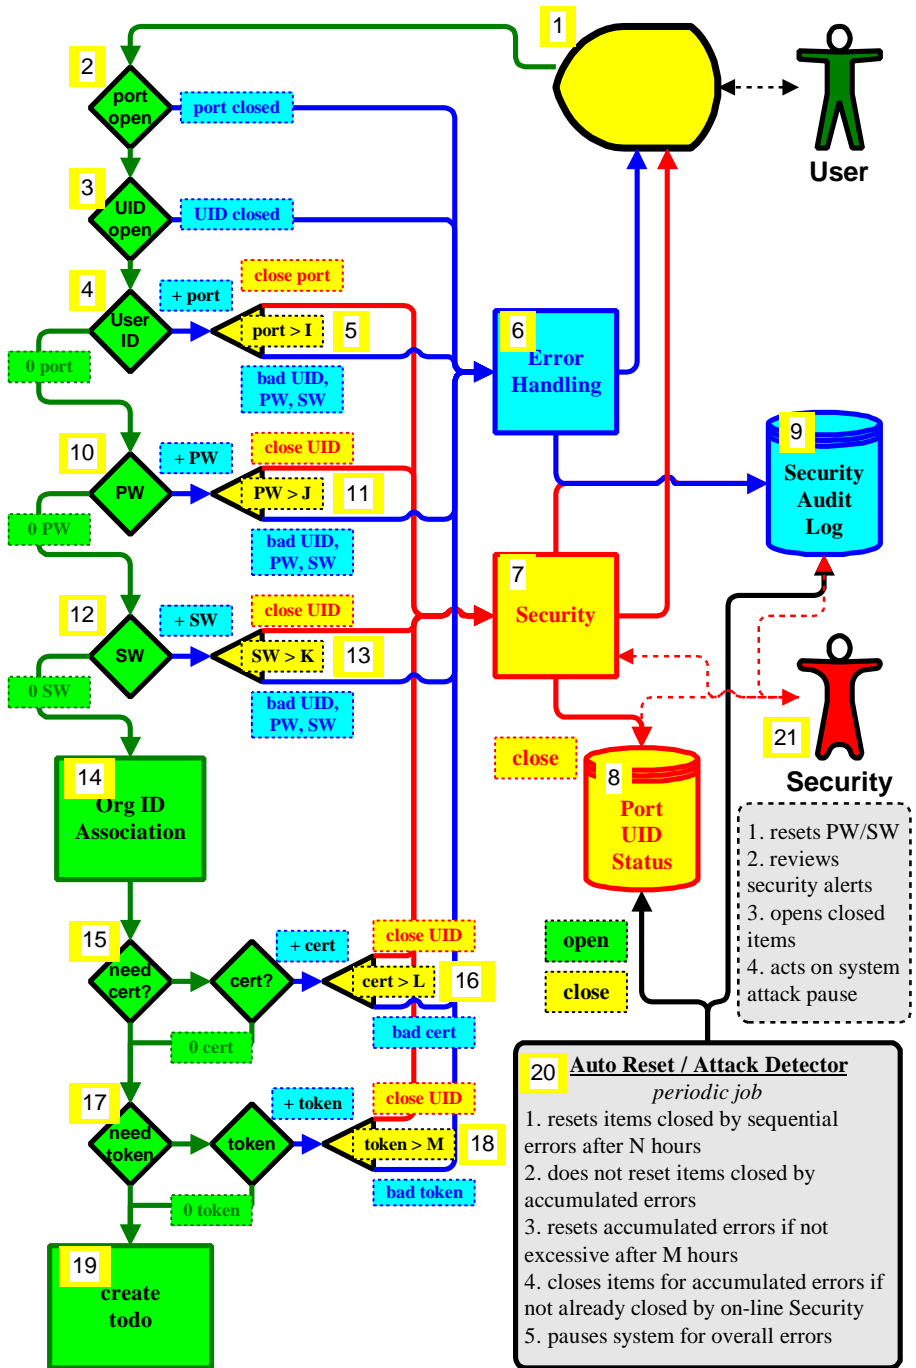

# Logon Error Flow:

## ePayIT Security

### Logon Error Handling

counts and timeouts. *Example*

- ### Security Error Handling
1. User enters Login information on initial screen
  2. Test IP not closed
  3. Test UID not closed
  4. Does UID Exist?  
(Y=zero port cnt)  
(N=increment port cnt)
  5. Port Errors High?  
(Y=close port)  
(N=retry message)
  6. Process error condition.
  7. perform security action
  8. store and access status
  9. log errors and security actions
  10. PW valid for UID?  
(Y=zero PW cnt)  
(N=increment PW cnt)
  11. PW Errors High?  
(Y=close UID)  
(N=retry message)
  12. SW valid for UID?  
(Y=zero SW cnt)  
(N=increment SW cnt)
  13. SW Errors High?  
(Y=close UID)  
(N=retry message)
  14. Establish Org ID & need for cert / token
  15. Need cert?  
Y = Cert Valid for UID?  
(Y=zero cert cnt)  
(N=increment cert cnt)
  16. Cert Errors High?  
(Y=close UID)  
(N=retry message)
  17. Need token?  
Y = token Valid for UID?  
(Y=zero token cnt)  
(N=increment token cnt)
  18. token Errors High?  
(Y=close UID)  
(N=retry message)
  19. display todo screen
  20. Periodic Auto Reset / Attack Detector process
  21. Security Role to:
    - a) reset UID, PW, SW, cert, token, Port
    - b) handle security alerts

## Security Levels:

	<i>0</i>	<i>1</i>	<i>2</i>	<i>3</i>	<i>4</i>	<i>something</i>
<b>User ID</b>	•	•	•	•	•	You know
<b>Password</b>	•	•	•	•	•	You know
<b>Secret word</b>		•	•	•	•	You know
<b>Certificate</b>			•		•	Browser has
<b>Token</b>				•	•	You have
	<i>View Demo</i>	<i>View data – some actions allowed</i>	<i>Secure User Actions</i>	<i>Remote Secure Actions</i>	<i>Security Actions</i>
